**Used Quality Machinery for Sale**

**Complete Lines**
- 2 Piece Alu. can line for beverage 211/206
- Pail Drum Line 20 Ltr. Sargiani 1995
- 4/5 Ltr. Rectangular auto.cans line + ends line
- Aerosol Can making lines
- Sacmi Crown Cap line PVC FREE
- 3 Piece auto can line+cooler 211,300,307,401

**Printing & Coating Machines/Lines**
- Crabtree & Malander 1 or 2 color presses
- Crabtree Marquess 2 col Print+UV oven + 45”x38”
- Crabtree 1290-2 color + FI coater+LTG oven
- Malander 122A-2 color(1995)+LTG oven 45”x38”
- 5 Color printing+coating line+ht oven of 2000

**Welding Machines**
- Soudronic NRZD 12 semi auto revised
- Soudronic FBB 5501 auto.welder+Frei oven
- Soudronic VAA K-100 auto.welder
- Smag auto welder for general line
- Ears welding machines auto & semi auto
- Soudronic VEA/K50 auto.welder

**General Individual Machinery**
- Coil Car & Upender v/good condition
- Angelus Seamers 60L-6 heads+120L
- KlingHammer STAV-Flanger/Seamer tools dia.153mm
- FMC-652 C1 Seamer 6 heads, tools 99mm
- FMI 8 head beader 99 mm dia
- Frei Body Forming machine 4/5Ltr rectangular cans
- SHIN-I Auto single slitters 42”+Waxing spray,1994
- Luberc auto. one head seamer LW211
- MB 548 Beader tools 603 (153mm)
- MB 560 Beader tools 83mm
- Cevolani BO4Q auto Die flanger dia 127+153 mm
- MB 151 auto Die flanger, tools 99mm dia
- MB 200 F6 auto flanger, tools 65/99mm dia
- MB 334 CRS/F auto.seamer dia.52mm
- MB 65 Spin Flanger tools 211
- Cevolani AQ 58 auto Rectangular 2 Seamers
- Bliss B21 Dbl.Die stripfeed press+dbl.curler,
- Pail Auto. Expander = 292/285
- MGR auto.Single head Seamer dia 285mm

---

**Used Equipment**

14,000 square metres, containing machines and a workshop for machine repair and overhauling.

**MEL** is another second-hand equipment company based in Spain. Founded in 1995, the company has a 15,000 square metre warehouse, in which two indoor stores have been constructed. The company tests all machines in its workshops before sending them onto the customer. In addition to individual machines for can making lines, the company also can provide complete two- and three-piece lines for installation.

Meanwhile, Can Making Solutions (CMS) of Linares, Spain has developed a partnership with Taleres Clementes, another Spanish firm, for rebuilding can making machines. Over €2 million has been invested in new tooling machines and in expansion of the workshop, according to the company. High-level rebuilt filling and seaming groups can now be manufactured by CMS, as well as producing tooling for the machines.

**YP International**, based in the UK, supplies can making equipment ranging from complete lines to welding machines to printing and coating lines. The firm also has a selection of individual machines such as welders, seamers, slitters and beaders. Labeling and shrink sleeve machines are also available from the company.

**North America**

US-based Container Fabrication Machinery (CFM) has a facility in Stockton, California, offering an indoor showroom with array of can making equipment – two- and three-piece can making, end making lines for both steel and aluminium including conversion presses, single and multi-line outputs. Also in stock are coil shearing lines, printing and coating presses, machine shop and quality control inspection systems. The 10-year-old firm also currently offers a selection of new Soudronic welder and Angelus seamer parts for sale.

Other CFM services include: asset management programs; asset recovery programmes; plant liquidation services; plant auction services; certified equipment appraisals; and complete rebuilding facilities.

**Brodie System** of the US is a service provider as well as a parts supplier, according to John Farrell, operations manager at Brodie. “We provide complete press and coater rebuilds, as well as cylinder, roll and other press component reconditioning in the two- and three-piece can markets. We have seen serious demand for press ready exchange cylinders for the Hoe press. We have increased our stock of exchange cylinders in the 36”, 38-1/2” and 45” press widths to accommodate customers. We have also increased our stock in D&I blanket cylinder shafts to offer expedited cylinder repairs in the two-piece market as well.

“These improvements allow our customers to rebuild their equipment with minimal downtime”, he points out.

Farrell notes that the company has also been collecting metal for reconditioning, in order to keep prices stable for its customers: “We have invested in maintaining an inventory of stainless steel and copper required in the reconditioning process to insure no interruption of our services and to stabilise prices due to the constant changing market conditions.”

He concludes, “Whether we are reconditioning copper rolls, printing cylinders, bearing housings, full press rebuilds or small parts repairs, the pressure to control costs without compromising quality endures.”

Meanwhile, AMJ Industries of the US has expanded into Latin America with the opening last year of an office in São Paulo, Brazil. The company supplies both two- and three-piece machines and complete lines, ranging from clean and repaint projects to labour intensive rebuild operations. Also available are mono-block aluminium and collapsible tube machines.

Recent projects for AMJ include a rebuilt uncoiler for a Chinese can maker, as well as rebuilding six sheet lines for a US corporation. The firm also offers technological upgrades on machines.

Lastly, US-based OKL Can Line offers a range of new and refurbished parts assemblies for bodymakers. The firm’s service department has an extensive background in both Ragsdale and Standun machines acquired through years of working in production environments in can manufacturing plants around the world. “This has given us a thorough working knowledge of all the equipment in the D&I areas,” according to the company.

In a year that will undoubtedly be dominated by ongoing economic concerns, Cannex Asia Pacific will be visiting China, a country with a metal packaging sector that is still experiencing growth. Metal cans represent a vital part of the packaging mix for food and beverage companies, personal care product manufacturers, industrial container users and fancy can producers. The following is a selection of the companies that will be exhibiting.

**Applied Vision, stand 501**
Applied Vision Corporation of the US will be showcasing its new defect classification technology as well as the latest developments in KromaKing colour inspection. The stand will also feature: Genius vision systems (inside can, converted end, food end, easy-open end, two- and three-piece can, shell, crown, cap and closure inspection) and VTRAC intelligent machine software.

“Our participation reinforces our commitment to provide the highest level of accessibility and support to every region we serve,” says Amir Novini, president and CEO of Applied Vision.

For further information please visit www.appliedvision.com

**KBA-Metalprint, stand 113**
In 2008 KBA-Metalprint developed a number of improvements which are aiding the performance of its printing machines. For the Metalstar 2 and Mailänder 222, a new ink duct with a nano-based material is available, thus reducing the time required for ink cleaning by half.

For the Sprint, the feeder 790 has been equipped with an automatic positioning control of the sucking head to maintain stable sheet separation. For special scroll designs a new aerodynamic lifting device ensures sheet flow on the infeed table without stoppages. Furthermore, new sheet guiding elements in front of the impression cylinder of the Sprint ensures an improved material flow. All new features for the Sprint are available as an upgrade. On the LTG ovens, a new intelligent management of the air flow reduces gas consumption on LTG Drying ovens with incinerator significantly. It is achieved by a reduction of the exhaust air as well as the temperature in the burning chamber of the incinerator during stand-by and changeover. The new air flow management provides a reduction of 10-15% in gas consumption, depending on the job structure.

For the LTG 470 and Mailänder 460 coating machines, KBA-MetalPrint has developed a new scraper system, enabling the customer to change the blade in less than a minute. The scraper is now independent and replacement is carried out by help of a special security guard. The new design also allows the blade to run with less pressure, which results in longer life time for both blade and bottom roller.

KBA-MetaPrint offers the successor model of the Mailänder 122A – the new generation Mailänder 222 printing machine. It is the ideal printing machine for small to medium sized can makers and customers who need flexibility and are printing on a wide range of materials. The Mailänder 222 is unique because of the gear system situated outside of the frame, which is a characteristic of high-end printing machines. It ensures a precise and long life time for gears and eliminates the danger of printing area spoilage.

The Mailänder 222 offers speeds up to 7,000 sheets per hour and a maximum printable sheet size up to 1200mm x 970mm.

For further information please visit www.kba-metalprint.de

**Intralox, stand 211**
Representatives from Intralox will present solutions for metal can handling at Cannex. As of 1 April 2009, can manufacturers in China have access not only to Intralox’s service packages, but also to guaranteed expedited shipping. Every customer receives a solution that is customized to its specific requirements, backed by a written money-back guarantee for belt performance, and the following benefits:

- Container team members dedicated to working directly with customers on each continent Intralox serves
- Corporate offices and assembly facilities worldwide, including in Shanghai, China and Tokyo, Japan
- Customer service available 24/7
- Over 25 years of experience applying conveyance best practices in the container industry

For further information, visit www.intralox.com

**CTI Inks, stand 134**
US-based CTI Inks will be introducing three-piece thermochromic ink as well as thermochromic ink for aluminum bottles.

This adds to the company’s current offering of two-piece thermochromic inks for both aluminum and steel cans. The company will be displaying samples for all types.

For further information, please visit www.ctiinks.com

**CTI's range of thermochromic inks will be on display for two and three-piece cans**
Micromec, stand 418
Micromec is the European leader in tab die and conversion die production for metal packaging, the company says. Several studies it has carried out over the last few years has enabled the company to be in the forefront with regard to materials saving and long life of the components of its tools. The company plans and executes turnkey projects and conversion tools, together with tab dies 0.25 mm thick and multiple lines on presses working at 500 rpm. The firm also plans and sells primary and secondary scroll dies made of full carbide. Furthermore, it is an OEM supplier on behalf of the main worldwide EOE groups. For further information, please visit: www.micromec.com

Schuler, stand 477
Schuler is presenting two presses at Cannex: the new DA 140 cupping press, for the production of two-part beverage cans, and the new generation of impact extrusion presses of the XS range with press forces of 150 to 1,200 tonnes – suited to the production of cans, tubes or other symmetrical bodies.

Sencon, stand 330
The Sencon stand at Cannex will emphasise helping customers with spoilage reduction as well as showing how cost savings can be achieved through reduction in energy consumption and raw materials usage.

With a press force of 140 tonnes and maximum speed of up to 350 strokes per minute, the DA 140 cupping press is designed for maximum output. Users generally operate at speeds of 250 strokes – corresponding to an output of around 3,000 cans per minute. Despite its high speed, a dynamic mass counterbalance means that the press can be mounted on dampering elements directly on the press shop floor. This enables fast integration into existing manufacturing environments without major construction work.

Launched in 2006, Schuler’s XS range represents a new generation of impact extrusion presses with forces of 150 to 1,200 tonnes. A technical improvement is the modified knuckle-joint drive. In contrast to conventional presses, it boasts not three but four articulated joints and thus enables the press to reach higher stroking rates – up to 220 strokes per minute – while at the same time offering slower forming speeds. This results in a number of benefits with regard to production technology.

Schuler is also cooperating with can manufacturing experts TG Can on sales, die equipping and press peripherals. The company has facilities in the UK and the US. For further information, please visit www.schuler-group.com

Sprimag, stand 424
Sprimag is showing its advanced inside spray machines: HIL-34 and the bottom spray machine (to spray the outside bottom of the steel can) with features that will increase the productivity of the can manufacturing process and increase the can quality. The flexibility of the machine design allows for customer requests to modify the machines.

For further information, please visit www.sprimag.com

Mall+Herlan, stand 459
Mall+Herlan of Germany supplies complete lines for the production of monobloc packagings made of aluminium. The company will be showing a Mall + Herlan printing machine type MHD with polytype printing unit, allowing users to decorate monobloc aluminium cans or bottles with up to nine colours, along with a DVD showing the production lines, and product samples manufactured on the machines.

Mall+Herlan has also developed the newest printing unit in the industry, according to the company. Thanks to the quick-change options on this printing machine, for example automatic roller and rubber blanket washing units, customers can reduce downtime when changing decoration by 50 per cent. With ever decreasing print run sizes, this new printing machine is claimed to increase line output by 10 per cent.

For further information please visit www.mall-herlan.de

Sencon Hoverprobe and coatings thickness gauge

The Sprimag spray machine HIL-34
Offering new and rebuilt cupping dies, shell dies and complete systems for the food and beverage container industries as well as specialty metal forming systems and product development.

Kronenbourg sparkles in Crown
Brasseries Kronenbourg, a French brewery and part of the Carlsberg Group, is launching a new fresh look for its Kronenbourg and 7.2 flagship beer cans using high quality print technology from Crown Bevcan Europe & Middle East. The switch to high quality print is part of Kronenbourg’s plans to revamp its brand with a more innovative and visually appealing package.

For the launch, Crown is supplying 33cl and 50cl printed cans, which include two revamped can designs developed for the Kronenbourg and 7.2 brands. The new beer cans feature a higher definition golden Kronenbourg logo with sharp vivid images and defined shapes against a red or purple background. Images of water droplets around the logo are brought to life with high quality print. High quality print technology is designed to reproduce and enhance detailed images such as faces, fruit and fine text on beverage cans. “This is very exciting for us, as it is the first time that Crown is providing high quality print technology on such a large scale,” says Caroline Archer-Reed, marketing director, Crown Bevcan Europe & Middle East.

Rexam does the ‘CanCan’
Rexam has been chosen by Guy Anderson Wines to help bring its new wine brand ‘CanCan’ to the market, using 250ml aluminium cans. The brand, to be officially launched at this year’s International Wine Fair in London, will initially introduce a Sauvignon Blanc from the South West of France to be followed up by a rosé Pinot Grigio and a sparkling Prosecco, both from Italy. Rexam first began helping to develop the wine in cans market back in 2006. Irene Martinez, category development manager at Rexam says “We are constantly keeping our eye on not only what brands are doing in the market and what packaging choices they are making but, just as importantly, what consumers are choosing and how their lifestyles are changing. We are seeing a gradual increase in the number of off-trade drinking occasions. Consumers are making the choice to consume at home or on-the-go and packaging wine in cans targets these occasions perfectly with its convenient, single serve and environmental benefits.”

CanCan is a premium quality wine, created by leading French winemaker Thierry Boudinaud. It offers a great wine drinking experience and a smart, distinctive design along with the benefits of the can. 2009 looks set for further developments and success in the wine in cans market. The can is single serve and ideal for on-the-go consumption, easy to store, recyclable and offering 360º branding.

A new Emerald Mountain Blend
Coca-Cola says it has reformulated its Emerald Mountain Blend Café Au Lait drink sold in the Japanese market in order to contain more quality coffee aroma and an enhanced refreshing aftertaste. This is achieved by using coffee beans processed via a high-temperature roasting technique. The soft drinks giant notes that this product is the only one to feature the rare Emerald Mountain coffee beans. The packaging design has also been revised.

For further information, please visit www.coca-cola.com

The madness of Adina
The US-based speciality drinks firm Adina for Life has launched its energy drink range of beverages based on coffee and milk. These include Vanilla Nut Case, Hazelnut Hook Up, Double Xxpresso and Mocha Madness. The drinks use Fair Trade organic Colombian coffee and are said to be devoid of preservatives, artificial flavours and colours. The energy comes from the coffee’s caffeine and via added guarana.

A victory for Kidz

Victus of the US has launched a liquid supplement called Enterex Kidz for 1-13 year olds with special dietary needs. The Kidz product is a nutritional beverage for children that provides 32 mg of DHA per eight-ounce serving, as well as additional calories, protein and vitamins. The drink is lactose and gluten-free. The product is sold online in the US and will be available in hospitals and care centers in numerous countries in South America.

For further information, please visit www.victus.com

Intralox’s ThermoDrive linkup

Intralox of the US has recently partnered with US-based Mol Belting Systems in order to become the provider of ThermoDrive conveyor belting. ThermoDrive belting is a positive-drive, low-tension belting with a continuous, easy-to-clean surface. Like Intralox modular plastic belting, Intralox ThermoDrive belts are suited for hygienic applications in food processing. With a 100% closed surface, these homogenous, thermoplastic belts can dramatically improve food safety, quality assurance, and operational efficiency.

ThermoDrive, LLC (a Mol Belting Systems subsidiary) will continue to manufacture ThermoDrive belting, while Intralox will provide belt fabrication, sales, and support. Intralox ThermoDrive products are currently available in the US, Canada and Europe. Service will soon be extended to Australia, New Zealand, Asia and Latin America.

For further information please visit www.intralox.com.

Eden Foods adds more BPA-free varieties

US-based organic food company Eden Foods has added four organic rice and beans products to its six varieties of rice and beans: Spanish, Mexican, Curried, and Moroccan. All are packaged in bisphenol-A free 15-ounce cans, the firm notes. Spanish rice and pinto beans is enveloped in a sauce of 100% organic tomatoes, vegetables, herbs, and spices; Mexican rice and black turtle beans offers 100% organic tomatoes, chilies, herbs, and spices; curried rice and green lentils features organic onions and organic curry spices such as turmeric; and Moroccan rice and garbanzo beans has Lundberg organic short grain rice and chickpeas spiced with coriander, turmeric, and cumin.

For further information, please visit www.edenfoods.com

Independent Can opts for second Metalstar

US can maker Independent Can has decided to order a KBA-Metalprint four-colour Metalstar 2 UV line. This is the second Metalstar 2 at the site, following the first installation of a six-colour Metalstar 2 in 2004. This printing line will be extended in a second step with a Sprint Revolver Coater Type 490, allowing the company to execute a six-colour print as well as applying the overvarnish in one pass. Commissioning is planned for the end of July 2009.

Pat Hennegan, general manager of lithography at Independent Can notes, “The decisive factor for our decision was the consistent quality and productivity achieved with the Metalstar 2 as Independent Can is committed to remain on the cutting edge of metal decorating technology”. Independent Can specialises in high-quality specialty cans and general line and serves both the US and overseas markets.

In related news, the world’s second largest packaging manufacturer Toyo Seikan is said to have placed an order for an eight-colour Metalstar 2.

The line is be due to commissioned in autumn 2009 and will provide printed metal sheets to the various factories of Toyo Seikan in Japan. It is one of the biggest metal decorators ever installed and configured, according to reports. The company had previously installed an eight-colour Metalstar 2 in 2005, and this new machine is in addition to it. This project will further increase efficiency and competitiveness and strengthen the company’s market position in Japan.

Welding Machines & Weld Seam Protection

For more information on the companies above:
E-mail: chot11000@gmail.com
The Brewers of Europe is a diverse organisation, consisting of brewer organisations from the EU member states, plus Switzerland, Norway and Turkey. The Eurozone has a diverse range of brewers and a diverse range of problems to tackle in the brewing arena. In western Europe, there is the issue of decreasing consumption and production. This has deepened this year because of the financial crisis, and has included Russia. However, we can’t complain when compared to other sectors – our industry has dropped by 1.5 to 4 per cent, depending on the country, but this is less than other sectors have seen.

The worst outcome so far has been seen in Germany and the UK. The latter has seen closures of pubs on a large scale. The issue of a minimum price per unit, while it has been tabled, remains a threat in the UK. It’s not a good thing for brewers. Other countries are also suffering, such as the Netherlands.

Meanwhile, countries that are continuing to do well are the big exporters – Belgium, the Czech Republic and Denmark. They are compensated for the drop in domestic consumption by the export market.

Our big challenge is working with legislation on a country-by-country basis. We try to get the various national governments to vote for the brewing sector, on important issues such as advertising bans or limits. There is already a complete ban on beer advertising in Sweden and France, and this is worrying.

We also campaign against excise duties on beer. There are around 3,000 small brewers in Europe, so excise duties fall heavily on them. The big multinational companies can go somewhere else, but the small brewers account for 2.6 million jobs in Europe, and excise duties discriminate against, and are very heavily damaging for, the small and medium-sized brewers.

We also work to provide advice on the environment for our members – on water conservation, energy use and other items affecting their businesses.

Overall, the outlook for brewers is good. I think, after all, the beer sector has been going on for thousands of years in Europe, and one-quarter of all beer produced globally is produced in Europe. Also, the big four multinationals all have their headquarters here – ABInBev, SABMiller, Heineken and Carlsberg. This is a unique situation that doesn’t exist in other sectors and we should be proud of that.

The brewing market is changing, and that is not necessarily a bad thing. Some brewers get merged, some go out of business, and then others take their place. Our membership has been getting larger, with our national organisations reporting increases in membership as well. For example, in France, five years ago there were 40 members, and this has now increased to 70 members in the national organisation. However, it is not a good thing to kill fledgling businesses with more excise taxes.

No two countries in Europe have the same policy on packaging, nor the same preferences – some countries prefer beer in cans, while others seem to like glass bottles.

There has been no European harmonisation on packaging as of yet, but I believe both metal and glass will continue to have a future in Europe. The recycling issue continues to be an important one and the day will come when there will be one directive from the EU about packaging for beers, but it is a very sensitive issue – and one of national pride in some cases.

Another issue for brewers is labelling for ingredients and nutrition. Fortunately for us, we have nothing to hide from the consumer – it is an agricultural product. It is a good product when consumers drink it in moderation, and we only ask that there is no discrimination against beer on behalf of other alcoholic drinks – we only wish for a level playing field with wine, spirits and so forth.

**Beer: some facts**
- Germany drinks the most beer in Europe – 118 litres per capita annually
- Sweden is very fond of cans – 64.2% of beer consumed in the country is sold in a can
- In the UK, 55% of beer sold is draught, and cans represent a strong 29.8% of all beer consumed

Simplify like never before, with Feature Suppression Technology.™

Introducing a breakthrough inspection solution for three-piece can beaded areas. Now just one tool, instead of several, lets machine vision suppress the variations and simplify the image so it can be inspected as a whole. It takes a Genius® system with new Feature Suppression Technology to bring this unprecedented simplicity and effectiveness to your operations. Detect the defects without false rejects in beaded areas and more. Feature Suppression is one of our powerful new technologies dedicated to maximizing your performance and profitability. That's pure Genius.

Feature Suppression Technology suppresses image variations created by rings in the beaded area (left), resulting in a simplified image (right) that improves inspection capability.

4 Wax Marks (Pass)
1 Scrap In Die (Fail)
2 Coating Scratches (Fail)
2 Clipouts (Fail)
3 Compound Voids (Fail)

1 Single Inspection Tool
